Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract of the disclosure is objected to because it is not one paragraph.

Correction is required. See MPEP § 608.01(b).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 5 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by either Atake or WO99/20450.

Both references disclose equipment for hot moulding of articles made of thermoplastic material, comprising a first half-mould (12,28 respectively) and a second mold half (25,30 respectively) which are free to move with respect to one another between an open and closed position and which are provided with respective moulding surfaces designed to carry out hot moulding of at least one plate (S, 12 respectively), at least one injection-moulding seat (16, 16 respectively) communicating with the

Art Unit: 1722

respective hot-moulding surface, at least one injection channel (13, 44 respectively) being provided for injecting plastic material inside said seat. The injection molding seats presents a narrow section.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Atake or WO99/20450 as applied to claims 5 and 6 and in further view of either Nakamura et al. or Ballester or Tajiri et al. or Starkey or Burger et al.

While the primary references do not disclose a slider movable between an operating and non-operating position and defining a part of the injection molding seat, the secondary references disclose movable sliders to be conventional in the art where the sliders form a part of an injection moulding seat. See Nakamura et al. Figs. 1 and 2, Ballester Figs. 6 and 7, Tajiri et al. Figs. 1a, 1b, 2, Starkey Figs. 2 and 3 and Burger et al. Figs. 1 and 2.
